In accordance with such requirements, the permittee is authorized to discharge from outfalls 001 and 002 only in accordance with the following conditions:</p> <p>(1) The permittee shall submit any existing toxicity data for review by the Mississippi Office of Pollution Control within 30 days of the effective date of this permit.</p> <p>(2) The permittee shall perform static renewal (test that exceed 48 hours shall be renewed), definitive (a control and five effluent concentrations) toxicity tests at 25 degrees C in accordance with "Methods for Measuring Acute Toxicity of Effluents to Freshwater and Marine Organisms", Fourth Edition, (EPA-600/4-90/027) or the most recent edition*. Acute toxicity tests will be conducted on 24-hour composite samples of effluent, and tests must be initiated within 36-hours of completion of the sampling period. [11 Miss. Admin. M-7		<p>Acute Bioassay Requirements- continued</p> <p>(2)(iii) A standard reference toxicant quality assurance test (acute) shall be conducted concurrently with the effluent tests using both species used in the toxicity tests. Alternatively if a lab conducts monthly QA/QC reference toxicant tests for both species as part of their SOP, these results may be submitted in lieu of the above mentioned concurrent tests. In either case the reference toxicant test results must be submitted in the final report as well as on the Mississippi Office of Pollution Control NPDES Whole Effluent Toxicity Testing Report Form. T-4 MINIMUM SWPPP COMPONENTS/DESCRIPTION OF STORM WATER MANAGEMENT CONTROLS:

The permittee shall describe appropriate storm water management controls addressing identified potential pollution sources and implement such controls. The description shall include a schedule for implementing the following minimum components:

(1) Pollution Prevention Manager/Committee. The SWPPP shall specify individual(s) responsible for developing the SWPPP and assisting the facility manager in it's implementation, maintenance, and revision.

(2) Risk Identification and Assessment/Material Inventory. The SWPPP shall assess the pollution potential of various sources at the facility including loading and unloading operations; outdoor storage, manufacturing or processing activities; significant dust or particulate generating processes and on-site waste disposal practices. Factors to consider include the toxicity and quantity of chemicals used, produced, or discharged, the likelihood of contact with storm water and history of significant leaks or spills of toxic or hazardous pollutants. The plan shall include an inventory of materials handled. Based on the Risk Identification and Material Inventory, the plan shall specify management controls, and, if necessary, structural controls to reduce or eliminate the potential for pollutants in the storm water discharges.

(3) Sediment and Erosion Prevention. The SWPPP shall identify areas with a high potential for soil erosion, and specify prevention measures to limit erosion.

(4) Preventive Maintenance. A preventive maintenance program shall involve inspection and maintenance of storm water management devices (cleaning oil/water separators, catch basins, etc.) and the inspecting and testing of equipment to preclude breakdowns or failures that may cause pollution.
