FOR COVERAGE UNDER MISSISSIPPI'S REISSUED
LARGE CONSTRUCTION STORM WATER GENERAL PERMIT MSR10
GENERAL NPDES COVERAGE NO. MSR10 8 2 80

INSTRUCTIONS

The submittal of this form is required to receive coverage under the reissued Large Construction General Permit. This form must be completed and returned to the address printed at the bottom of the back page of this form by April 30, 2022.

The signatory of this form must be the owner or operator (prime contractor) who is the current coverage recipient (rather than the project manager or environmental consultant).

If the company seeking coverage is a corporation, a limited liability company, a partnership, or a business trust, attach proof of its registration with the Mississippi Secretary of State and/or its Certificate of Good Standing. This registration or Certificate of Good Standing must be dated within twelve (12) months of the date of the submittal of this coverage form. Permits will be issued in the company name as it is registered with the Mississippi Secretary of State.

Amendments to the Storm Water Pollution Prevention Plan (SWPPP) are required to be attached if the plan is not current or is ineffective in controlling storm water pollutants. SWPPP amendments with the sole intent of incorporating new permit conditions do not need to be submitted to MDEQ for review and/or approval.

If the project is complete and final stabilization has been achieved, please request termination of coverage by completing the Request for Termination (RFT) Form found in the Large Construction Forms Package. Projects that continue to discharge storm water associated with construction activity without applicable permit coverage are in violation of state law.

Do not submit this form if submitting a Request for Termination (RFT) Form.

1. The first part of the paper discusses the general properties of the system under study. It is shown that the system is characterized by a set of parameters which are independent of the system size. The results are compared with those obtained from other studies.

2. In the second part, the authors analyze the data obtained from the experiments. They find that the system exhibits a transition from a state of order to a state of disorder as a function of the system size. This transition is characterized by a critical point which is independent of the system size.

3. The authors then discuss the implications of their results for the understanding of the system. They conclude that the system is a good example of a system which exhibits a transition from order to disorder as a function of system size.

4. The authors also discuss the implications of their results for the understanding of the system. They conclude that the system is a good example of a system which exhibits a transition from order to disorder as a function of system size.

5. Finally, the authors discuss the implications of their results for the understanding of the system. They conclude that the system is a good example of a system which exhibits a transition from order to disorder as a function of system size.
