RE: MSG110228 Recoverage Application

Dear Ms. Williams,

Please find our Ready-Mix Concrete Recoverage Form for MSG110228. Below is a brief description of the Kiln operations at our facility.

The Kemco VaporMite is a steam generator that produces steam for our kilns to cure the concrete block. It has a chamber that is approximately 12 inches in diameter and 36 inches in length. It starts up by a spark plug producing a spark that ignites the natural gas in the chamber. When the natural gas is ignited it then heats up the water from a water softener that then turns to steam that goes into the kilns and heats up to 120 degrees. This happens 3 times within a 24 hr period, and the process is repeated each time a bay in the kiln is filled with blocks.

Please feel free to contact me if you should have any questions or concerns at dpudvah@smyrnareadymix.com or 850-933-3210.

Sincerely,

Danielle Pudvah
